Vortex ABAP Development Solutions

Many companies struggle with balancing their ABAP development needs for ongoing projects and production support. We offer flexible solutions from complete outsourcing of your ABAP development to backfilling your ABAP support work with remote resources. We will customize our solutions to meet your company’s specific needs.

We have a very strong roster of talent with our average consultant possessing 10 – 15 years of ABAP development expertise. They are all Onshore US or Canadian Citizens or strong Green Card candidates with outstanding communications skills and strong functional business process knowledge. Our consultants not only code, test, document and support their solutions but they can work with your functional team or business to lead the overall development effort.

ABAP Development Packages

Vortex Onsite Development - This is our ABAP staffing solution where our highly skilled ABAP programmers work at your project location for a specified contract period.

Vortex “Total” Remote Development – With this service we cover all of your ABAP development requirements at a fixed price. You can have a dedicated resource or a part time resource based on your needs. This service is for a contract period of 12 months. There is a monthly allotment of hours with a carry forward of up to 6 months for any unused portion. We can provide remote project management with this solution for an additional fee or you can manage the consultant as part of your project team.

Vortex “Lite” Remote Development – This is similar to our “Total” remote development solution but based on blocks of 100 hours. Once they are used up an additional block can be purchased.

We have had great success with our remote development services. It is a cost effective, flexible approach as there are no travel costs and you use only the hours that you need!

“I would highly recommend Vortex. They are professional, dedicated, and have the ability to provide resources who consistently exceed one’s expectations.”
John Trecka,
Director of IT
MSL Manufacturing
